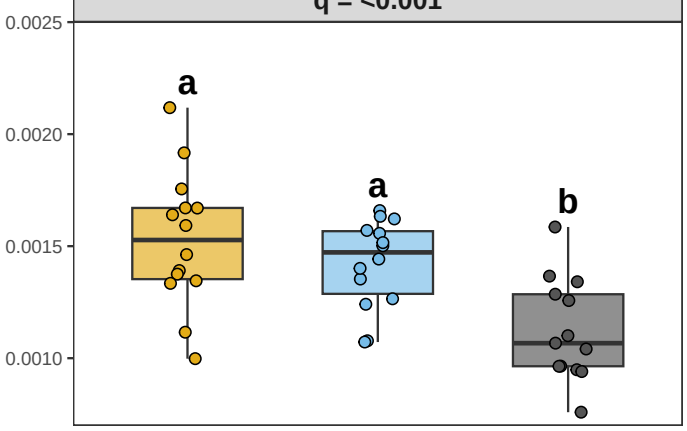
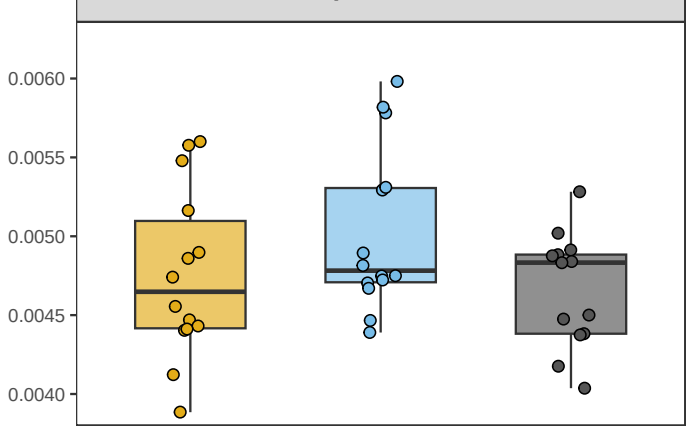
Functional−group responses to litter photodegradation

Litter photodegradation: Full sunlight; Reduced UV; Reduced UV and blue−green

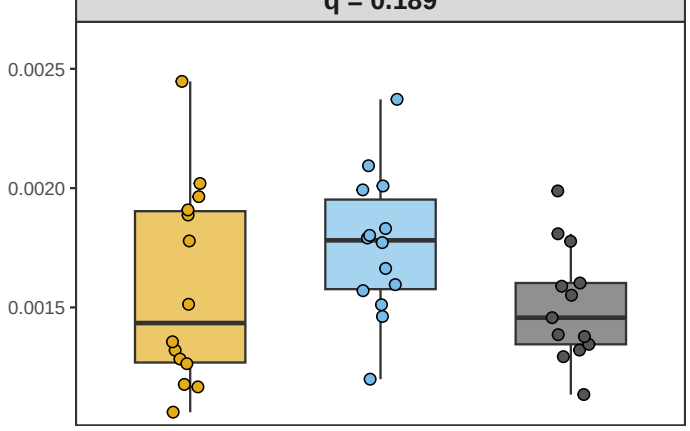
Alpha−glucan and fructan processing
q = <0.001



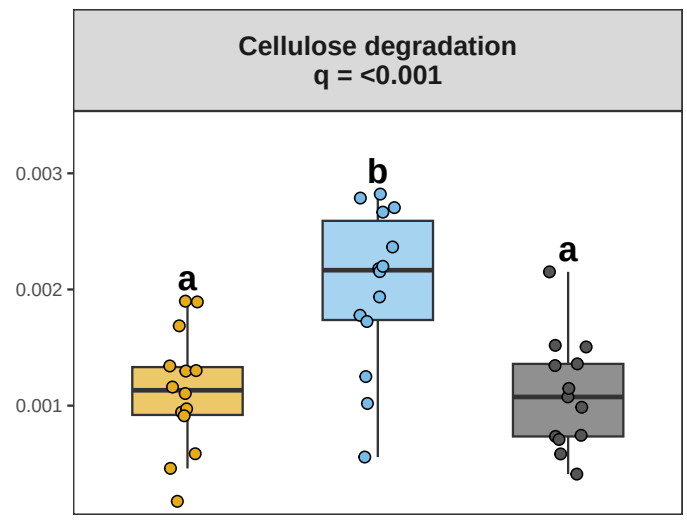
Aromatic−compound catabolism
q = 0.098



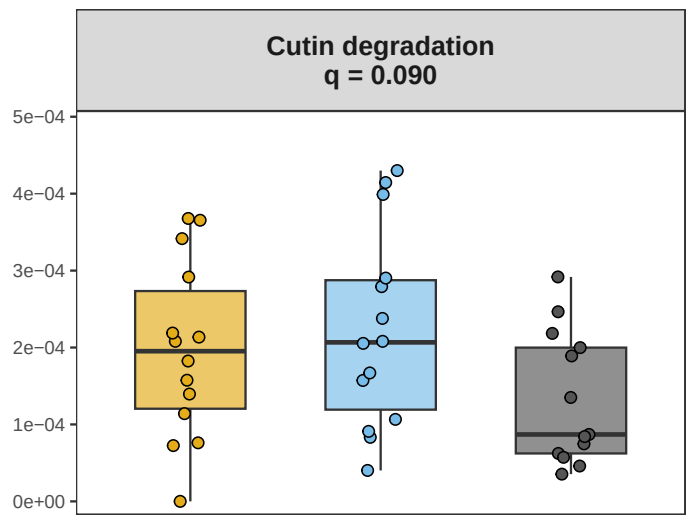
Carotenoid biosynthesis and modification
q = 0.189



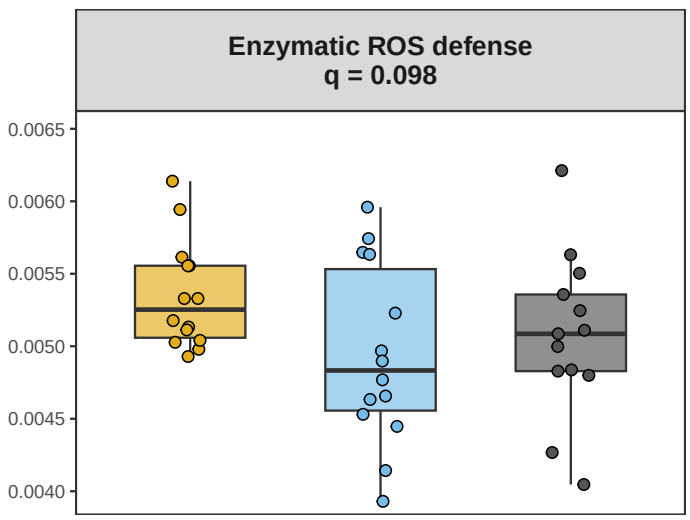
Cellulose degradation
q = <0.001



Cutin degradation
q = 0.090

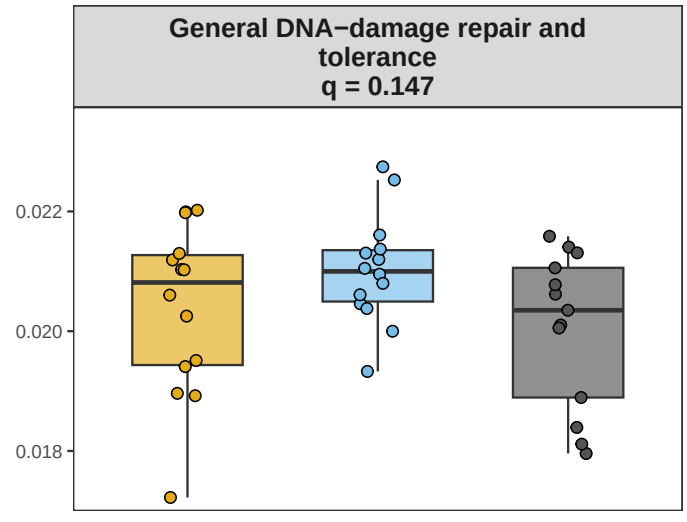


Enzymatic ROS defense
q = 0.098

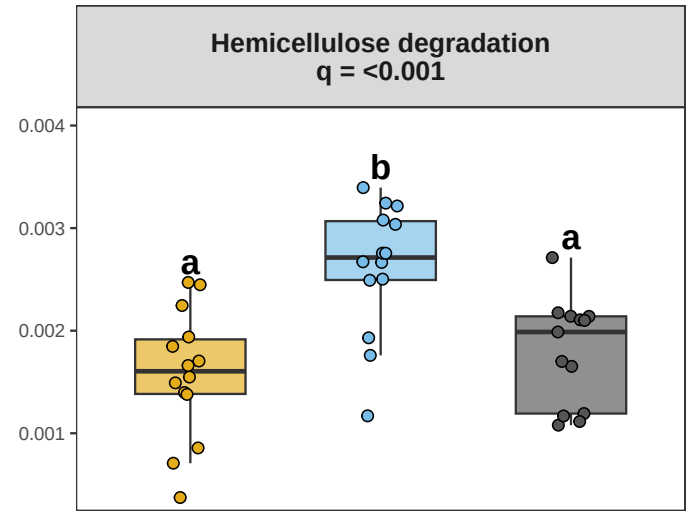


Relative abundance

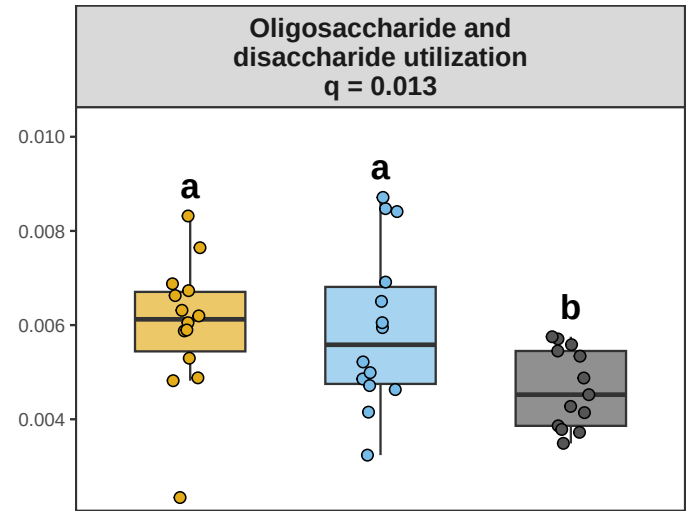
General DNA−damage repair and tolerance
q = 0.147



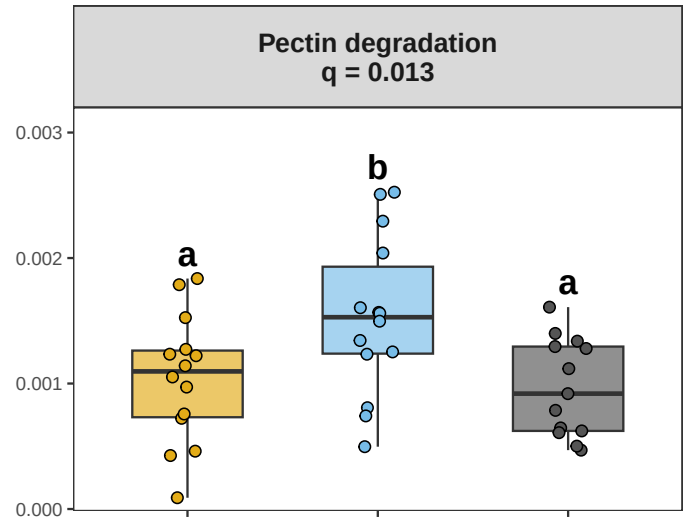
Hemicellulose degradation
q = <0.001



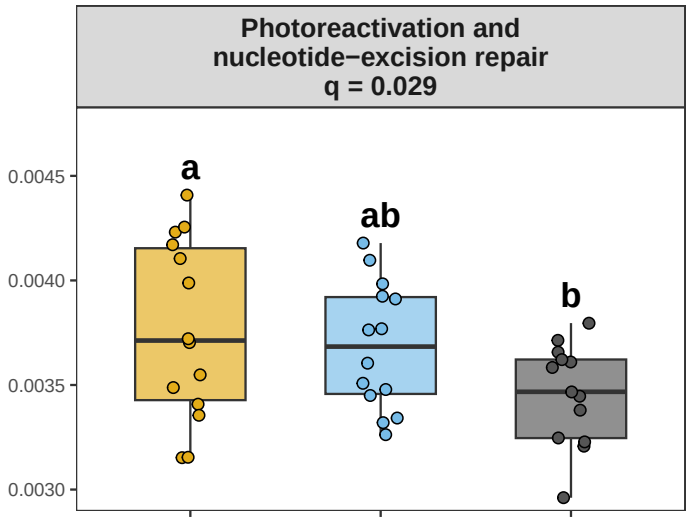
Oligosaccharide and disaccharide utilization
q = 0.013

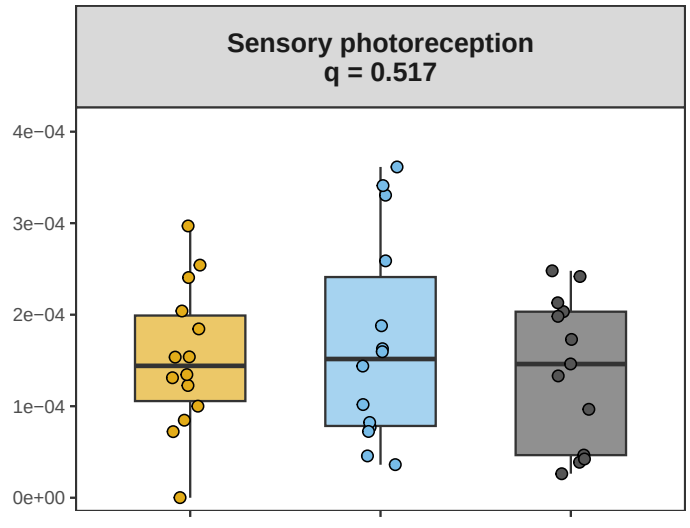


Pectin degradation
q = 0.013



Photoreactivation and nucleotide−excision repair
q = 0.029





Sensory photoreception
q = 0.517
